Practice workbook · Explain how tissue fluid forms, what it does and why it builds up

Pressure at the capillary bed pushing fluid out and drawing it back, its composition compared with blood, exchange with cells, lymph drainage and swelling.

10 question parts: 1 worked-example retry and 9 further practice parts.
Name: _____ Class: _____ Date: _____

Practise one question type at a time. Attempt the part inside the red boundary; the rest of the question and any figures are kept for context. Write your working in the answer space.

The first question is a retry of the website worked example, without its solution. Check your answers online with 'Check my answer', or ask your teacher for the answer booklet.

Type ID: HBI-TISSUE-FLUID-FORMATION-AND-FUNCTION

1. Question 8 · part b · 4 marks

November 2024 Paper 1

Worked-example retry · Attempt part b only.

8 Body cells are surrounded by tissue fluid.

(a) Describe the function of tissue fluid.

(2)

(b) Explain how tissue fluid is formed.

(4)

(c) Some people have a condition called cellular oedema.

In these people too much water enters body cells.

Explain how water can enter body cells from the surrounding tissue fluid.

2. Question 4 · part a.ii · 4 marks

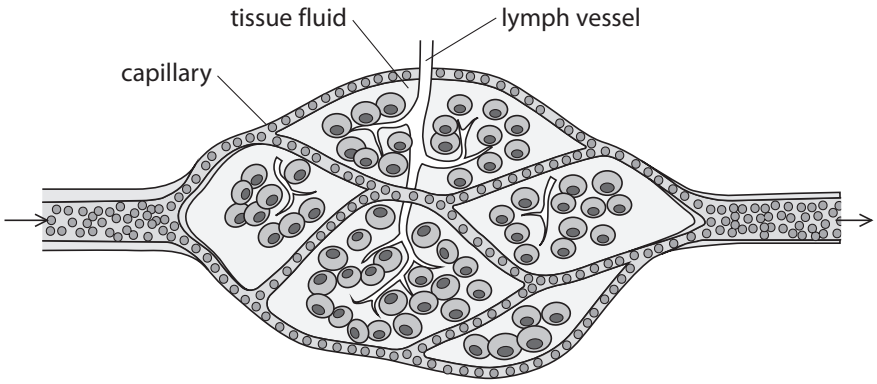

January 2023 Paper 2

Further practice · Attempt part a.ii only.

4 (a) When blood flows into a network of capillaries, tissue fluid is produced.

The tissue fluid supplies the surrounding cells with molecules.

The diagram shows a network of capillaries and surrounding cells.

(i) Give two differences between the composition of tissue fluid and the composition of blood entering the capillary network.

2. Question 4 · part a.ii · 4 marks

January 2023 Paper 2

Further practice · Attempt part a.ii only.

(iii) Lymphoedema occurs when tissue fluid builds up causing swelling.

This is more common in the legs and arms.

One treatment for this is to increase physical activity, resulting in more muscle contraction.

Explain why increased muscle contraction could reduce the swelling caused by the build up of tissue fluid.

(2)

(b) Lymphocytes, found in lymph nodes, produce antibodies in response to specific antigens.

Explain why the reaction between an antigen and an antibody is specific.
