Practice workbook · Identify bacterial cell structures and compare with human cells

Labelling bacterial cells and comparing their parts and functions with human cells such as skin cells or sperm.

9 question parts: 1 worked-example retry and 8 further practice parts.
Name: _____ Class: _____ Date: _____

Practise one question type at a time. Attempt the part inside the red boundary; the rest of the question and any figures are kept for context. Write your working in the answer space.

The first question is a retry of the website worked example, without its solution. Check your answers online with 'Check my answer', or ask your teacher for the answer booklet.

(b) Many structures in cells can be viewed more clearly using a light microscope.

The diagram shows a light microscope.

(i) Draw **one** straight line from each part of the light microscope to its function.

(3)

Part of microscope	Function
objective lens	holds the microscope slide in place
stage clip	moves the stage to produce a clear, focused image
fine adjustment	magnifies the sample
	keeps the microscope steady

2 (a) Bacteria can cause disease in humans.

The diagram shows how one type of white blood cell helps to defend the body against disease.

(i) Complete the diagram by drawing the shape of the white blood cell at stage 2.

(1)

(ii) The box lists words associated with bacteria and disease.

acids	enzymes	erythrocytes	lymphocytes	phagocytes	toxins

Use words from the box to complete the sentences.

(2)

White blood cells called ..... engulf bacteria.

These white blood cells contain ..... to digest bacteria.

(iii) One way that white blood cells defend the body from disease is shown in the diagram.

State another way in which white blood cells defend the body against disease.

(c) Viruses can also cause diseases in humans.

Many viruses contain RNA as their genetic material.

Which statement describes the structure of RNA?

(1)

☒ **A** a double-stranded helix containing the bases ATGC

☒ **B** a double-stranded helix containing the bases AUGC

☒ **C** a single-stranded helix containing the bases ATGC

☒ **D** a single-stranded helix containing the bases AUGC

3 (a) The diagram shows a type of bacterial cell.

(i) The boxes give some structures found in the bacterial cell and some functions of cell structures.

Draw one straight line from each structure to its correct function.

(3)

Structure	Function
cell membrane	protects against pathogens
	helps the cell to move
ribosomes	makes proteins
	holds the genetic code
flagellum	controls which substances enter and exit the cell

(ii) State two structural differences between the bacterial cell and a sperm cell.
