Type MS · Explain ultrafiltration and selective reabsorption in the nephron

Answer 1 of 13 · Question 6 part a.iii · 4 marks

2021 JUN · Paper 01 · extract 1 of 2 · find part a.iii in this mark scheme extract

number				
6 (a)	(i)	• separating different sized molecules out of the blood/only allows small molecules to pass; • under pressure;		2
	(ii)	• A has more glucose; • A has more urea; • A more amino acids;	ORA vessel B allow references to more oxygen in A and less carbon dioxide in A	3
	(iii)	• Vessel A bring blood to Bowman's capsule/glomerulus; • vessel B has narrow(er) lumen/diameter; • causes increase/higher blood pressure; • to force out molecules;		4
(b)		• glucose would pass from blood; • respiration affected/reduced; • lack of energy/ATP;		3

Answer 4 of 13 · Question 8 part a.i · 2 marks

2019 JUN · Paper 02 · extract 1 of 2 · find part a.i in this mark scheme extract

8 (a)(i)	• high (blood) pressure (in the glomerulus); • small molecules/named small molecule forced / filtered/pass through (into Bowmans capsule);	Do not allow protein	1 1
(ii)	Any four from: • lower concentration of glucose/oxygen in blood in renal vein; • used in respiration; • less/no urea in renal vein; • urea excreted in urine; • more carbon dioxide in renal vein; • carbon dioxide produced in respiration;	Allow reverse argument throughout	Max 4
(b) (i)	quantity of salt (in food);		1
(ii)	Any two from: • different foods used (which may affect the amount of urea produced/amount of water reabsorbed); • different people used who may be different genders/ages/ have a medical condition/different metabolism (that affects osmoregulation/water balance); • the food/drink consumed by the people prior to the investigation was not taken into account (which will influence the quantity of urea/water in urine produced);		Max 2
(iii)	use one person only (and vary salt intake)/monitor / control food/water consumption/give each person the same food (but vary salt content);	Allow valid alternatives	1
