Question number	Answer	Notes	Marks

Type MS · Identify brain regions and match them to their functions

Answer 2 of 9 · Question 7 part a · 3 marks

2019 JUN · Paper 01 · extract 1 of 2 · find part a in this mark scheme extract

7 (a)		Letters can be anywhere within outline shown. Allow labels in place of than letters.	3
(b) (i)	Motor;		1
(ii)	Any one from the following: (sensory neurone): longer dendrites/shorter axon/cell body outside of spinal cord/CNS/in middle of neurone/transmit impulse to the CNS/brain/spinal cord (motor neurone) shorter dendrites/longer axon/cell body at one end of neurone/inside spinal cord/transmit impulses from CNS/brain/spinal cord	Answer must be comparative and state which type of neurone is being referred to	1
(iii)	• chemicals/neurotransmitters; • diffuse; • across a synapse; • bind to receptors (on post-synaptic membrane);		3
(c)	• stem cells are undifferentiated/unspecialised/can differentiate; • could be made to form nerve cells; • to replace damaged cells in brain;		1 1 1

Type MS · Identify brain regions and match them to their functions

Answer 3 of 9 · Question 6 part b · 1 mark

2019 JUN · Paper 02 (regional R) · extract 1 of 2 · find part b in this mark scheme extract

6(a)	short term is recent event/long term goes back many years; short term very little processing, long term has more processing;		**(2)**
Question Number	Answer	Additional guidance	Mark
6(b)	cerebral hemispheres/cerebral cortex/frontal lobe/cerebrum;		**(1)**
Question Number	Answer	Additional guidance	Mark
6(c)	• language/speaking/talking problems / repetitive actions/confusion; • loss of voluntary muscle function; • loss of intellectual capacity/function; • deterioration in social behaviour;		**(2 max)**
Question Number	Answer	Additional guidance	Mark
6(d)	• blocks synapse/cleft/build-up of plaques; • prevents diffusion of acetylcholine / transmitter/neurones communicating; • blocks post-synaptic receptors/prevents generation of new impulse; • death of neurones;		**(3 max)**

Question Number	Answer	Additional guidance	Mark
6(e)	• inhibits/prevents breakdown of acetylcholine / transmitter; • increases chance of synaptic transmission / neurones communicating/generating new impulse; • reduces death of neurones;		**(2)**
Question Number	Answer	Additional guidance	Mark
6(f)	formation of β-amyloid is caused by incorrect breakdown of APP; build-up/formation of β-amyloid (in neurones);		**(2)**

number			
3 (a)	C hypothalamus; A does not control sweating B does not control sweating D does not control sweating		1
(b)	B motor; A transmits impulse from sensory to motor C alternative name for A with same function D transmits impulse to brain		1
(c)	• (sweat) evaporates from (the surface of) the skin; • using heat from body/blood; • cools body/reduces body temperature;		3
(d)	• runs in families; • must be faulty/mutated gene/chromosome/allele; • which transfers/passes on information to offspring;		3
(e)	obesity / high sugar intake / high BMI;		1
(f)	• exercise/activity of individual varies; • greater rate of aerobic respiration; • heat given off as by-product/increased body temperature; • external temperature varies; • hotter more sweating/cooler less sweating; • mass of individual varies; • volume of water in the body/fluid intake varies;	Allow reverse argument for mps 2 and 3	5 Total 14

Answer 9 of 9 · Question 3 part d · 1 mark

2024 JUN · Paper 02 · find part d in this mark scheme extract

Question number			
3 (a)	Smoking cigarettes; Causes (lung) cancer/emphysema/bronchitis/heart disease/eq ; OR lack of exercise; obesity/heart disease/high blood pressure/ type ii diabetes/eq;	Allow drugs or named drug and their effect on health for 2 marks.	(2)
(b)	Any two from: • production of bile reduced/affected; • less fat emulsified/fat not emulsified; • lipase less active/lipase unable to digest as much (fat)/slower lipase activity;	Allow bile not produced Allow description of emulsification	(2)
(c)	blurred/misty vision/blindness/less light passing through the lens / less light reaching the retina;		(1)
(d)	cerebrum/cerebellum/ cerebral cortex/cerebral hemispheres/hypothalamus/medulla (oblongata);	Allow any part of the brain that is affected by alcohol	(1)
(e)	Any three from: • reduces release of neurotransmitters; • reduced diffusion across synapse; • less neurotransmitters bind to receptors on post-synaptic membrane; • slows/ fewer transmission of impulses; • slower reaction /reflexes;		(3)
(f)	Any two from • increased heart rate; • increased breathing rate; • pupil dilation; • increase in blood sugar/glucose levels/ increased breakdown of glycogen to glucose; • increase in blood flow to brain/muscles; • increase in (aerobic) respiration (in muscles);		(2)
